

# ADVANCED ISSUES WITH VAR, STRESS TESTING, AND EXTREME VALUE THEORY

GRAEME WEST  
FINANCIAL MODELLING AGENCY

## CONTENTS

1. VaR	3
1.1. Basic definitions	3
1.2. Alternatives and supplements to VaR	4
2. Calculation of VaR	5
3. RiskMetrics©	7
3.1. Moment matching	14
3.2. Classical historical simulation	15
3.3. Historical simulation with volatility adjusting	16
3.4. Monte Carlo method	18
4. Incorporation of the skew into VaR calculations	25
4.1. Why is there a volatility skew?	25
4.2. Local volatility models	27
4.3. The SABR model	27
5. The option pricing formula	30
5.1. The interpretation of parameters	31
5.2. Using the model in risk management	34
6. Variations on Var	36
6.1. DelVaR	36
6.2. Marginal, component and incremental VaR	37
6.3. Relative Var	40
7. The Regulatory Environment	43
7.1. South African Regulatory Status	43
7.2. The Internal Models Approach	44

7.3.	Basel II	45
7.4.	Backtesting	47
7.5.	A comparison of the backtesting performance of the different models	51
8.	Coherent VaR-type measures	55
8.1.	VaR cannot be used for calculating diversification	55
8.2.	Risk measures and coherence	56
8.3.	Measuring diversification	57
8.4.	Coherent capital allocation	57
8.5.	Greek Attribution	59
9.	Stress Testing	61
9.1.	Why VaR type measures are inadequate	61
9.2.	Implementation of regulatory stress testing	65
9.3.	Stress testing for asset managers	65
9.4.	What stress tests are being performed internationally?	66
10.	Extreme Value Theory	72
10.1.	Theoretical considerations behind EVT	73
10.2.	EVT in the South African portfolio context	80
10.3.	Difficulties with EVT	80
11.	Integration of VaR, Stress Testing, and EVT	80
